

SummerShift

Energy Incentive Program for Commercial Customers

Offered by LADWP for the second year, SummerShift is an energy load-shifting program designed to preserve electric reliability during the summer. The program runs from June through September in the summer of 2017 and 2018 and provides an incentive per kilowatt (kW) to large commercial and industrial customers who agree to shift the hours that they use energy from high demand, peak periods to earlier or later in the day.

Benefits

- Receive an incentive (\$10 per kW) through a bill credit or check.
- Help prevent cost impacts and inconveniences of electrical service interruptions.
- Partner with LADWP in ensuring reliable power this summer to benefit all customers.

Who Qualifies

- Any A-2 or A-3 customer with a demand greater than 250 kW and a smart meter that will measure the amount of energy shifted or reduced.

How It Works

- Participants sign up for SummerShift to receive an incentive for the amount of electricity (per kW) shifted or reduced between the hours of 3 p.m. and 5 p.m. weekdays in June, July, August, and September of 2017 and 2018.
- Participants enter a contract with LADWP for the months of the program. The contract will cover the two summers of 2017 and 2018.

Options for Shifting Energy Use

Customers have a number of options to reduce or shift their energy use, including:

- Shift work schedules to two hours earlier.
- Shift the hours of production or operation to two hours earlier or later.
- Adjust thermostats, reduce lighting, and reduce AC usage from 3 p.m. to 5 p.m.

Not sure what you can do? We can help! LADWP staff will visit customers' sites and recommend ways to reduce and shift electric use. LADWP also provides access to Web-based tools that measure daily energy use.
